## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 3 are rejected under 35 U.S.C. 102(e) as being anticipated by Hyatt Jr. 6,564,601.

Regarding claim 1, Hyatt Jr. teaches all the elements of the claimed invention including an outer shell (102) having a bore and a cavity (102a), a barrel (101), side bar (101g, Fig 8G) cooperating between the shell (102) and barrel (101), the side bare is movable relative to the barrel and the shell as is well known in the art. Hyatt Jr also teaches a blocking mechanism located in the barrel (101 105d, 101b, Fig. 8F) positionable in a blocking position in contact with the side bar, which position blocks retraction of the side bar from the cavity in the shell and prevents rotation of the barrel and also positionable in an unblocking position relative to the side bar, which permits the side bar to be retracted from the cavity in the shell to allow the barrel to be rotated with respect to the shell, see col. 9, ln 45 to col. 11, ln 20, specifically col. 10, ln 4-13; 51-67. Hyatt Jr also teaches an electrically activated drive mechanism cooperating with the blocking mechanism to selectively move the blocking mechanism from the blocking

position to the unblocking position in which the side bar moves out of the cavity upon rotation of the barrel (col. 10, ln 51 to col. 11, ln 19) and control means for activating the electrically activated drive mechanism in response to an authorized attempt to operate the lock cylinder (104, col. 10, ln 63 to col. 11, ln 5).

Regarding claim 3, Hyatt, Jr teaches slider bar (105d) movable relative to the side bar and in said unblocking position having a recess (105n) in the slider bar positioned adjacent to an extension (not labeled in Fig 8G) in the side bar (101) for receiving said extension upon rotation of said barrel.

***Allowable Subject Matter***

Claims 3-13, 15-20, 22, 24, 25 are allowed.

Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SUZANNE BARRETT whose telephone number is (571)272-7053. The examiner can normally be reached on maxi-flex.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patricia Engle can be reached on 571-272-6660. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
